

SCCM 2012 R2

This specialised The Skills Academy workshop provides students the skills and knowledge required to install, configure and administer a fully functional System Center Configuration Manager (SCCM) 2012 R2 primary site spanning multiple subnets and Active Directory sites. Taking only five days, students will learn to deploy operating systems, applications and patches as well as additional SCCM features such as software inventory, hardware inventory, boundary groups, reporting and much more.

Skills Academy workshops offer a better way of learning by building the skills and confidence required to work in a real world IT environment. With a more time efficient and 'hands on' approach to training, resulting in hundreds of satisfied students, businesses have benefited from improved IT productivity and a rapid return on investment. Places are limited to only six per workshop guaranteeing each student an in-depth level of support to maximise their development.

“The workshop was excellent and I’ve been putting the skills to use straight away by rolling out SCCM 2012 R2 within a week.”

Duncan
ICT Technical Support Analyst
Dorset County Hospital

- Plan & assemble System Center Configuration Manager (SCCM) 2012 R2 prerequisites including SQL 2012
- Install a standalone SCCM 2012 R2 primary site
- Create and configure boundaries & boundary groups
- Configure discovery methods including system, user, group and Active Directory forest
